

R-32 REFRIGERANT

Your brief guide to R-32

- Use only in equipment that is designed to use R32.
- R32 offers reduced environmental impact and potentially lower running costs.
- GWP = 675. Requires less F-Gas “Quota”.
- Check with the equipment manufacturer for specific handling requirements and recommendations.
- Familiarise yourself with the Safety Data Sheet.
- Cylinder valve has a left handed thread and needs a specific adaptor – this can be purchased separately.
- Be aware of the handling requirements for a mildly flammable (A2L) refrigerant *(NB refer to equipment guidelines)*.
- Tools such as manifolds, leak detectors and recovery machines should be compatible with R-32 – check with your equipment manufacturer.
- Do not retrofit R-410A equipment with R-32. You could create a safety risk.

Your one stop shop
for low GWP refrigerants
