MAIN APPLICATIONS

R-744 (carbon dioxide) is a refrigerant designed for industrial and commercial refrigeration applications. It can be used in direct expansion systems, in cascade refrigeration (sub-critical) with HFC or NH₃ or HFO booster systems (trans-critical).

OILS

CO₂ has its own behaviour characteristics with oils, particularly in terms of miscibility and solubility. The selection of oils should be made depending on the application or system and those specified by the compressor manufacturer. Specialist Polyolester miscible oils (POE), polyalphaolefin (PAO) and polyalkylene glycol (PAG) immiscible oils are available. Check with Climalife regarding the viscosity of the oil selected for your application, and the miscibility with the fluid under consideration.

PRECAUTIONS OF USE

Refer to the Safety Data Sheet*.
